Louisiana: A Case Study on Business Advocates for Childcare

There are over 14,000 children under age six in Louisiana, 69% of whom have working parents. Yet, as in many states, the number of affordable, high-quality childcare options does not meet the demand, forcing many Louisiana families to choose between leaving the workforce or placing their children in unregulated care.

Across the state, chambers of commerce, business alliances, companies, and nonprofits have recognized this problem and have seen high-quality childcare as a two-generation solution to solving some of the state’s most pressing challenges: school readiness and the skills gap. Together, these groups have played a critical role in catalyzing improvements to the childcare system, garnering increased public attention and investment.

With a childcare challenge that threatens the strength and productivity of the workforce of today and tomorrow, the stakes for finding solutions are high. This case study looks at how business leaders become advocates and joined forces with policymakers, educators, and others in the community to improve the childcare system.

LOUISIANA: THE STATE OF PLAY

Businesses and companies across the country understand that breakdowns in childcare affect the bottom line. Breakdowns in care occur for a number of reasons, including when a child is sick and cannot attend school or a care facility, when an employee has a family who is taking vacation or sick time, and natural disasters or interruptions (e.g.,lementary or holidays). In Louisiana, the costs of these breakdowns have been quantified. According to a 2017 report “Leaving Ground: employers stand to lose $816 million each year owing to these breakdowns.”

The ABCs of Evidence-Informed Policymaking
Principles and Strategies for State Policymakers

State leaders make policy and budget decisions that directly impact important outcomes for residents—such as public safety, health and well-being, transportation and educational attainment. Using the best available research and data to guide these decisions is the key to evidence-informed policymaking. Evidence can help officials from all branches of government strategically target resources to programs and policies that are effective, promote innovation, improve transparency in budgeting, and build and sustain a culture of continuous learning and improvement.

Always important, the role of data- and research-driven decision-making is particularly critical in times of lower revenues and budget deficits, such as those states are facing as a result of the global coronavirus pandemic. These circumstances make it even more critical for policymakers to use reliable information and target limited resources to the most effective programs and policies.

The following principles were developed by a working group of state legislators, senior legislative and executive branch staff, researchers and NCSL staff, who are dedicated to advancing the use of evidence in their states. These principles, listed in the form of ABCs, identify and address common challenges to evidence-informed policymaking and offer steps policymakers can take to implement and sustain an evidence-informed approach to governance. State approaches for each principle are featured in the appendix.

Table Discussion

○ What stands out to you looking at the registry?

○ Are you familiar with these programs?
  • Are they in your state?

○ What programs are implemented, or in the implementation process, in your state that target 0-4 (infant and early childhood)?

○ Who from your state and network will you share this registry?
  • Or who do you think might like to know about it (such as policymakers or staff, executive branch, program implementors or others)?
