Comparison of FY 19 Cumulative VFC Provider Orders to Orders in FY 20 and FY 21 for All Non-Flu Vaccines and Measles Containing Vaccines (through the week beginning 10/5/2020)

- The graph above represents the difference in cumulative VFC vaccine doses ordered in FY 20 and FY 21 when compared to the baseline year of FY 19.
  - The negative values on both Y-axes indicate the FY 20 and FY 21 doses ordered are less than the FY 19 doses ordered for the same period of time for both lines shown on the graph.
  - When the slope shows a steep decline, it indicates the doses ordered in FY 20 or FY 21 are lower than FY 19 during the same period of time.
  - When the slope flattens (e.g., week beginning 5/11 for the green line), it indicates the doses ordered in FY 20 or FY 21 are comparable to FY 19 for the same period of time.
  - When the slope changes direction and shows an incline, it indicates the doses ordered during FY 20 or FY 21 are higher than FY 19 for the same period of time.
