Managing the Costs and Risks of Electric Grid Infrastructure Investments

Modernizing the U.S. electric grid will create new opportunities for competition, efficiency, reliability and resilience. Modernization can present financial challenges and risks, however. What are the regulatory approaches and policy considerations for managing the costs and risks of distribution grid infrastructure investments? Drawing on recent examples, presenters will explore these issues along with policies legislators may wish to consider to manage the costs and risks of grid modernization.

Presenters:
- Fritz Karl, 3rdRail Inc.
- Jeff Morris, Senior Director State Government Relations for North America Operations, Schneider Electric

Q&A

- Opportunity to ask the speakers questions and to allow for an open discussion among Task Force members and partners.
