Family PTSD Education and Counseling Center: Pilot Project
Pilot Project

The purpose of this proposal is to implement pilot programing to address the needs of families who have a soldier in the family who suffers the affects of Post Traumatic Stress Disorder (PTSD) symptoms. The program title is “Family Treatment Center for Soldiers Affected with PTSD”. The program focuses on educating family members regarding the symptoms of PTSD and counseling family members to learn effective coping strategies when symptoms of PTSD manifest through the soldier affected with the disease. By treating the whole family, rather than the soldier alone, families can build a firmer support system for the soldier and a more affective system of coping with symptoms for family members affected by PTSD.
Cover the cost of family respite stays at the Ranch, including:

- ADA compliant housing
- Meals and Entertainment

Significant investment in ADA upgrades at the facility
Support for Project

- **Military**
