

Disaster Recovery

Presented by:

Joel Redding

Kentucky Legislative Research Commission

September 10, 2009

- A "Disaster" is an unavoidable catastrophe that usually occurs unexpectedly.
- "Recovery" is going from disaster to full production again - either averting the disaster completely, or being able to bounce back from it.

- There are four categories of computer disasters.
 - Natural
 - Human-Induced
 - User-Induced
 - Hardware Related

- Natural Disasters

- Fires
- Floods
- Lightning
- Tornadoes
- Hurricane Winds
- Earthquake

• Human-Induced Disasters

- Crime/Theft
- Arson
- Vandalism
- Terrorism

- User-Induced Disasters
 - Formatting of Hard Drives
 - Accidental Erasure of Data
 - Malicious User Actions
 - Cyber-Terrorism
 - Hacker Attack

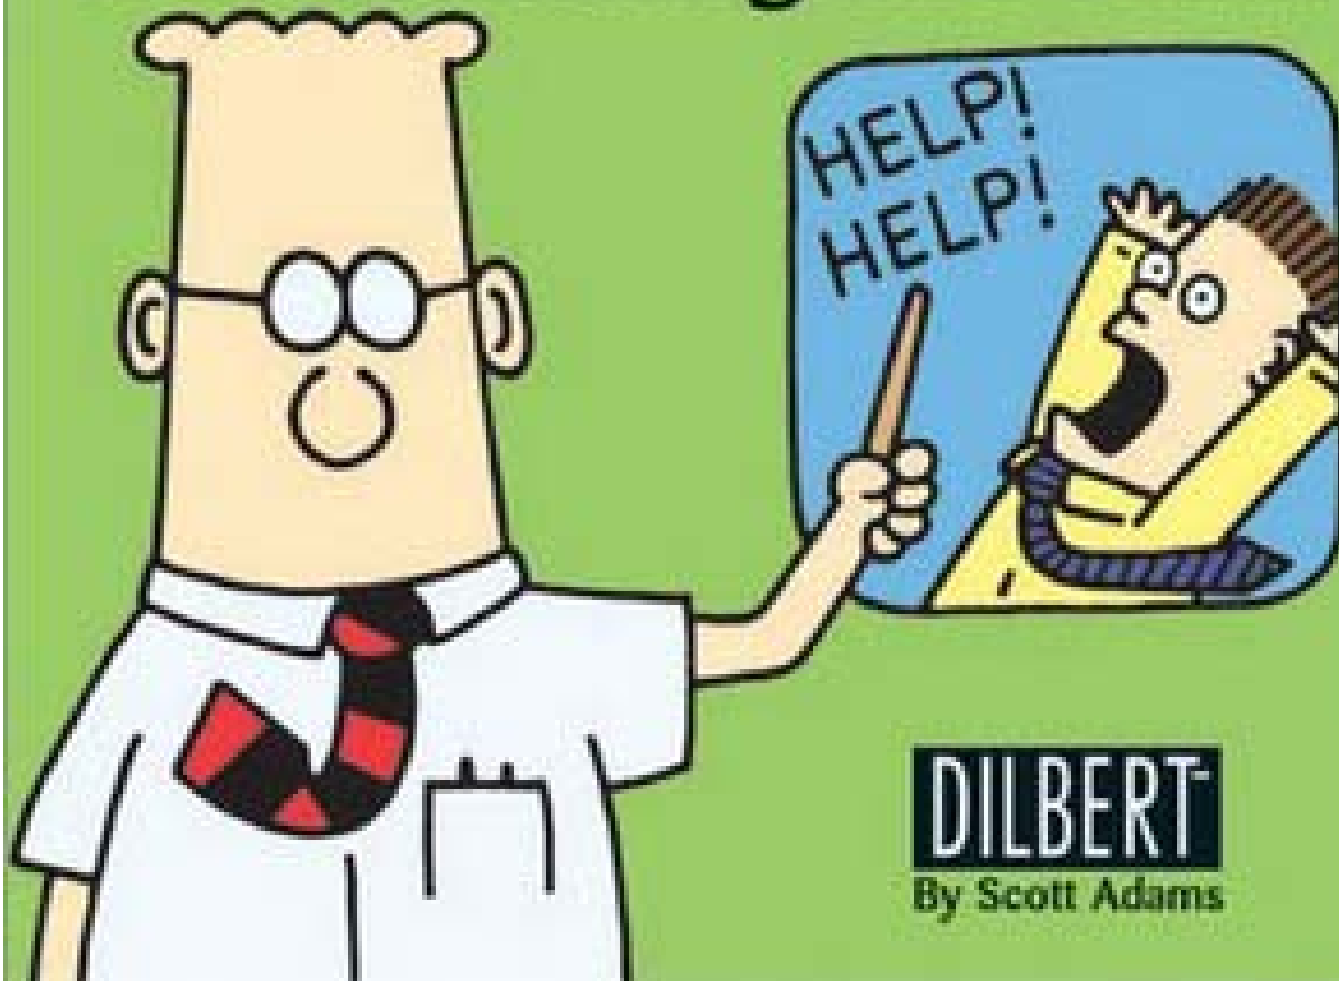

- Hardware Related Disasters
 - Hard Drive Failure
 - Computer Malfunction
 - Data Corruption
 - Virus

- Disasters will happen at some time. It could be on a large scale or it could be something small, either way we have to prepared.
- Will you be ready?

Our Disaster Recovery Plan Goes Something Like This...

Thank You

Joel Redding
