An effective information security program involves protecting your organization from emerging threats while embracing new technologies and managing daily operations to ensure compliance with countless rules and regulations. Combine this with the challenges of finding and retaining experienced security staff and identifying the best way to allocate your budget and resources, and it becomes quite clear that IT security groups are too often stretched thin.

Organizations choose to partner with Dell SecureWorks because we understand these challenges. We have created a diverse portfolio of information security services that empower security teams to focus their resources where they make the most sense. Our security experts serve as an extension of your security team, filling in the gaps to strengthen your organization’s security and compliance postures and reduce your risk.

Services underpinned by elite cyber threat intelligence

Threat intelligence underpins all aspects of our services portfolio. With global threat visibility, intelligence formulated by the Dell SecureWorks Counter Threat Unit (CTU) research team is applied to security device signatures and policies, attacker black lists and event correlation. In addition, intelligence on threat actors and their tradecraft is actively shared across our security analysts, consultants and incident responders through an open feedback loop, providing content and context for every engagement. As a result, clients receive sharper, more effective support across our entire services portfolio.

Dell SecureWorks is positioned in the Leaders Quadrant of Gartner’s Magic Quadrant for Global MSSPs\(^1\).
We understand the nature of the business challenges you face, and can help you with security, risk and compliance strategies that effectively address those challenges.

**Embrace IT transformation**

With Dell SecureWorks, you don’t have to say “no” to good ideas simply because you don’t have the time or resources to assess them. We can help you embrace new technology adoption through a variety of assessment and consulting services that address mobile security, cloud security and other emerging technologies.

In addition, you can prioritize business needs while remaining confident that daily operations are covered and trusted advisors are available for guidance when needed.

"Dell SecureWorks has provided the means to focus the efforts of my organization on what matters. Coupled with the intelligence and engineering support Dell SecureWorks provides, we have continuous improvement in our capability to deliver secure solutions to the company."

IT Director, Large Enterprise Aerospace and Defense Organization

**Simplify compliance**

Organizations partner with Dell SecureWorks to make compliance a byproduct of their security program. We have expertise in a wide variety of regulatory compliance frameworks including providing key controls for regulations including GLBA, PCI, SOX, HIPAA, FISMA, NERC CIP and ISO 27001/27002.

Our security consultants help you meet compliance with applicable mandates and incorporate best practices and effective internal controls. Our managed services simplify the compliance process, closing any gaps and easily demonstrating compliance by automating reports for management, auditors and examiners.

**Dell SecureWorks helps organizations strengthen their security and compliance postures against an ever changing threat landscape and reduce risk.**

The Dell SecureWorks Counter Threat Unit research team’s intelligence on threats underpins the operations of our Managed Security Services and Security Operations Centers, and is shared widely with our security consulting teams.

**Managed Security Services**

Dell SecureWorks offers a wide range of managed IT security services for enterprise clients. The strength of our Managed Security Services lies in our proprietary management technology, our certified security analysts and elite threat intelligence to protect clients from attacks 24x7x365. Our security analysts serve as an extension of your team to monitor for and detect threats across your environment. Our services are tailored to meet each client’s unique environment and can be delivered in a wide range of options.

**Threat Intelligence**

Threat intelligence extends your visibility of threats beyond the edges of your network. Our security experts seek to collect relevant information wherever it can be found, and then analyze and synthesize it into meaningful guidance on which you can act. In today’s cyber threat landscape, intelligence can alert you to global trends and developments that matter most to your organization. Intelligence can also help you identify actors who may be specifically targeting your organization or its executives, and provide the insights to help you defend and even preempt the attacker.

**Security and Risk Consulting**

Our Security and Risk Consulting team provides expertise and analysis to help you enhance your security posture, reduce your risk, facilitate compliance and improve your operational efficiency.

Our consultants are among the most technically proficient in the industry, with broad and deep skill sets and a variety of security certifications. Our security consultants can help you test and improve your security defenses, streamline security processes, design and develop new security programs, and source highly experienced security staff for critical projects.
Incident Response and Digital Forensics

Our Incident Response and Digital Forensics practice provides rapid containment and eradication of threats, minimizing the duration and impact of a security breach to your organization. Leveraging our cyber threat intelligence and global visibility, we can help you prepare for, respond to and recover from even the most complex and large-scale security incidents.
